

OrderUp CafØ POS - Live Screenshot Checklist

Screen 1 - Cashier Menu

Left panel shows seeded cafØ menu grouped by Drinks, Food, and Desserts.

Tapping any item adds it to the active cart.

Screen 2 - Cart and AI Add-on

Middle panel captures table number, order type, payment method, quantities, and kitchen notes.

AI add-on card appears after cart changes and shows the recommendation source.

Screen 3 - Kitchen Board

Right panel lists live orders with item notes and status chips.

Next Status moves tickets through PENDING, PREPARING, READY, and COMPLETED.

Screen 4 - Payments and Split Bills

Pay captures the remaining amount as one payment.

Split 2 and Split 3 divide the remaining bill into multiple Payment records.

Capture Instructions

Run the app at <http://localhost:4200>, capture the four screens above, and export them into this PDF for final submission.

This file is intentionally a checklist, because real screenshots should be captured from the live app after MySQL, Spring Boot, and Angular are running.
